

# Infant & Child Development Program

## What is the Infant & Child Development Program?

The Infant and Child Development Program is a family-centred program designed to assist infants and children from birth to 5 years of age who have a developmental delay or are at risk of developmental delays.

For infants and children whose developmental progress may be delayed or at risk, the Infant and Child Development Consultants will provide parents with the information they need to help their child learn to his or her potential.

## What we do:

We support the child's development by assessing, monitoring, and modeling interventions in the following:

- Cognitive development (thinking and learning)
- Social-emotional development (i.e., play)
- Gross motor development (i.e., sitting, crawling, walking, etc.)
- Fine motor development (i.e., picking up small items, holding a crayon, etc.)
- Speech and language development; and
- Self-Help skill development

We support parents to:

- Coordinate the services they receive
- Get more information about a child's medical or developmental issue (i.e., make referrals for appropriate assessments)
- Refer to other specialty services as needed
- Make referrals for financial supports and funding as appropriate; and
- Transition the child into school
